

Leopard Geckos

Reptile Care

**Temperature:**

Keep one end of the enclosure around 90 degrees with a cool spot in the low 80s.

**Habitat:**

Many different commercial substrates and climbing fixtures are great options to decorate your enclosure. A hide should be present on the cool side of the enclosure.

**Experience Level:**

Novice

**Lighting:**

Leopard geckos are nocturnal but still need 10 hours of lighting per day. Since they are nocturnal, they do not require a UVB bulb. For added temperature a red heat lamp or a heating pad can be used overnight.

**Staple Diet:**

Crickets, Mealworms, Hornworms and Superworms

Supplement:

Waxworms (to add fat) and CalciWorms® (to add calcium in a natural method)
